Hi, I'm **Harsh Hasmukhbhai Trivedi from Shree Dhanvantary College of Engineering And Technology** . I recently had the opportunity to attend an IBM Edunet Foundation session focused on Artificial Intelligence and Retrieval-Augmented Generation (RAG), and it was truly an enlightening experience.

The session was thoughtfully structured and delivered in a way that made complex concepts easy to understand. The facilitators did an excellent job of breaking down technical topics into digestible insights, making the learning process both engaging and impactful.

What I found most valuable was the hands-on approach. Exploring real-world applications of AI and RAG helped me connect theory with practice and sparked ideas for how these technologies could be applied in my own academic and professional journey. It was more than just a learning session—it was a gateway to innovation.

I'm grateful to the IBM Edunet Foundation team for organizing such a meaningful experience. Their dedication to creating accessible and high-quality learning opportunities is truly commendable. I look forward to participating in more sessions and continuing to grow in this exciting field.
